SUMMARY

Full Stack Developer with 2+ years of experience building scalable, high-performance, responsive web applications using React.js, Next.js, Node.js, TypeScript, Express.js, MongoDB, and PostgreSQL. Delivered production-grade systems that improved application performance by 45%, reduced security vulnerabilities by 70–80%, and increased operational efficiency by 30–40%. Experienced in REST APIs, JWT/RBAC authentication, SSR/ISR, Clean Architecture, Domain-Driven Design (DDD), and secure, scalable system design.

CORE SKILLS

Languages: JavaScript (ES6+), TypeScript
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Redux, Material UI, Responsive Design
Backend: Node.js, Express.js, GraphQL, REST APIs, WebSockets, Prisma ORM
Databases: MongoDB, PostgreSQL, Redis, Supabase
DevOps & Tools: Docker, Git, GitHub, CI/CD, Vercel, WebSockets
Design Patterns & Practices: Domain-Driven Design (DDD), Clean Architecture, SSR, ISR
Testing: Jest, React Testing Library, Playwright

PROFESSIONAL EXPERIENCE

Full Stack Developer | **Intelliclick Services Pvt. Ltd.** | Remote Nov 2024 – Jan 2026

- Built and shipped a scalable CRM dashboard for 500+ internal users using Next.js, React.js, and TypeScript, reducing manual data-entry workflows by 30% through workflow automation.
- Improved application performance by 35–45%, reducing Time to Interactive (TTI) from ~6s to <3.5s using lazy loading, code splitting, and intelligent client-side caching.
- Optimized application performance by implementing SSR and ISR in Next.js, improving responsiveness by 25% and delivering faster page rendering.
- Eliminated 100% of client-side token exposure by migrating authentication to HTTP-only cookie-based JWT, mitigating XSS-driven session hijacking risks.
- Accelerated frontend development by 40% by building a reusable design system of 20+ accessible UI components using Redux, Material UI, and shadcn/ui, reducing feature delivery time.

Software Developer | **FlyingFox Labs Pvt Ltd** | Hyderabad Jul 2023 – Aug 2024

- Developed and documented 15+ RESTful APIs using Express.js, server-side validation, and structured error handling, reducing API integration issues by 60%.
- Mitigated brute-force attack exposure by 70% by implementing rate limiting, request throttling, and authentication middleware, blocking 1,000+ malicious requests weekly.
- Refactored the backend using Clean Architecture, reducing codebase coupling by 50% and enabling seamless extraction of 3 independent microservices.

PROJECTS

Ed-Tech Examination Platform — *Production-Grade EdTech System*

Architected and built a production-grade EdTech examination platform enabling educators to monetize premium assessments and students to securely access time-bound exams through a role-based access model.

- Designed the system using Domain-Driven Design (DDD) and Clean Architecture, separating domain, application, and infrastructure layers to improve scalability, maintainability, and extensibility.
- Engineered a framework-agnostic, database-agnostic platform with clear separation of concerns, enhancing testability, maintainability, and long-term adaptability.
- Eliminated 100% of client-side authorization vulnerabilities by moving permission enforcement to the server through centralized authorization policies.
- Prevented unauthorized access by approximately 80% by implementing server-side RBAC with role-scoped API authorization and protected route enforcement.
- Minimized sensitive data exposure through centralized error mapping and standardized API response policies, preventing unintended information leakage across all endpoints.

EDUCATION

M.Tech in Digital Systems

University College of Engineering, Osmania University | CGPA: 7.5 / 10.0

Aug 2018 – Nov 2020
